Freezer Space Can Now be Configured Your Way with Modular Freezer Racks

Wayne, NJ – Typical racks for laboratory freezers are generally expensive, heavy and come in preconfigured heights and depths often taking up unnecessary room in already crowded freezers. Bel-Art – SP Scienceware® Modular Ultra Low 5 Box Freezer Racks offer a customizable storage solution that can be easily integrated with existing freezer storage boxes and freezers.

“These racks are perfect for lab freezers storing samples for multiple experiments or multiple people because users can configure freezer space to suit their needs, and change configuration whenever required,” according to Mike Grzelak, Product Manager for SP Scienceware.

Sold individually, users can purchase only the number of racks they need, which cuts down on wasted space and cost. “They can be linked together horizontally and stacked vertically for a custom layout within your space.” added Grzelak. “Add the optional cover and you have usable space on top of your freezer racks.”

Each rack holds five standard 5¼ x 5¼ x 2”H freezer boxes in pull out drawers for easy access to all samples. They come in a choice of four colors to assist in organizing and identifying samples. See our video showing how easily they can be arranged at www.belart.com/modrack.
